

Mapping *Finnegans Wake* scholarship: “the elucidation of complications” (*FW* 109.05)

Richard Barlow and Jonathan Reeve

This report details progress being made on a project titled ‘Mapping *Finnegans Wake* scholarship: Creating an online research platform linking the full text of *Finnegans Wake* text to existing analysis.’ The project began in 2018 and involves academics based at Nanyang Technological University, Columbia University, and the Centre for Manuscript Genetics, University of Antwerp. Funding for the project is being provided by the Singapore Ministry of Education’s Tier 1 Academic Research Fund. The aim of the project is to link scholarship on James Joyce’s *Finnegans Wake* (1939) from the digital library JSTOR to a digital text of the book. Joyce (1882-1941) is a hugely important writer with a massive scholarly industry dedicated to his works. *Finnegans Wake* is his final text and is a central text of literary Modernism. However, due to the difficulties and complexity of the text (it is an extremely rich text containing lexical elements from roughly seventy different languages, numerous complicated plots and ‘nodal structures’, and extensive use of allusion and multilingual wordplay) it remains a great challenge for the reader and is often described as “unreadable.”¹

As writers such as Jacques Derrida and Steven Connor have suggested, *Finnegans Wake* is something like a premonition of the internet or the information age, in that it stores so much interrelated information and that it behaves like a hypertext. Furthermore, its ‘nodal systems’ invite readings that connect disparate points within the text while its references and allusions are similar to the way data is connected online.² Computers and the internet—especially annotation sites

¹See page vii of Seamus Deane’s introduction to the Penguin edition of *Finnegans Wake* (London, 1992), for example.

²“The *Wake* seems to model itself, not on the newspaper, as *Ulysses* seemed to do, but on the culture of electronic communications which was inaugurated in 1876 with the near-simultaneous invention of the telephone and the phonograph and accelerated in the early decades of the twentieth century with the rapid development of radio, cinema, and, from the mid-1920s, television . . . *Finnegans Wake* may be said to predict and exemplify the age of electronic media. Electronic media are the fulfilment of the scientific promise of universal convertibility of forces . . . It is perhaps not surprising then that the increasing interest in applying contemporary computer technology to the study and reading of Joyce should begin to disclose a profound affinity between such technologies and their object. If *Ulysses* and *Finnegans Wake* call for the resources of hypertext and multimedia databases to make visible and available the wealth of interconnections of which each consists, then this is perhaps partly because the works themselves appear singly or collectively to be what Derrida, again spurred

like fweet.org—have changed the way we read *Finnegans Wake*. We are less likely to experience the text in a fully linear and ‘physical’ way these days—at least in academia—and more likely to seek out complex textual systems and patterns through the use of information technology. Despite the affinities between *Finnegans Wake* and information technology, there is currently no website linking the text of *Finnegans Wake* to scholarly articles about its various sections. In other words, there is nothing digitally linking the primary text to the secondary texts. At the moment, there are only non-university aligned websites providing elucidations/annotations to the text (such as fweet.org). Furthermore, there is currently no ‘map’ to tell us which sections of the text have been researched and which sections remain critical ‘blind spots.’ Our digital platform will contain a digital ‘map’ detailing which sections of the text of *Finnegans Wake* have received high levels of attention/scholarship and which have remained relatively unexamined.

The completed platform will include an online text of *Finnegans Wake* (in public domain since 2013) with hyperlinks to secondary material in JSTOR, initially on work available in the flagship Joyce studies journal *James Joyce Quarterly*. Users studying a specific section of *Finnegans Wake* will be able to see at-a-glance if any scholarship on that section is available. If the user has access to JSTOR (through their university for example), they will be able to access the material via hyperlink. As such, the proposed research platform will be of interest and use to the Joyce studies/Irish studies/Modernism studies communities both academic and non-academic. The research platform will be especially useful for scholars working on words/sentences/sections of *Finnegans Wake* as they will be able to instantly ascertain what work has already been carried out. Our research platform might also encourage non-academics to read and work with the text.

After an preliminary presentation at the ‘Finnegans Wake at 80’ conference held at Trinity College Dublin in April 2019, the project sourced a digital text of *Finnegans Wake* (courtesy of Dr Wim Van Mierlo, University of Loughborough). In January 2020 the project received a large customized dataset from JSTOR via their ‘Data for Research’ program. The dataset consisted of all the journal articles on Joyce’s *Finnegans Wake*. Following work by Jonathan Reeve, we have found that there are three main *Finnegans Wake* critical hotspots (i.e. three areas in the novel most frequently quoted in the academic literature): these are

into Wakean imitation, has called a ‘programotelephonic encyclopaedia’ (Connor, Steven and Creasy, Matthew. *James Joyce* second edition. Tavistock: Liverpool University Press. 2012, 89–96). See also: “this 1000th generation computer – *Ulysses*, *Finnegans Wake* – besides which the current technology of our computers and our micro-computerified archives and our translating machines remains a bricolage of a prehistoric child’s toys. And above all its mechanisms are of a slowness incommensurable with the quasi-infinite speed of the movements on Joyce’s cables. How could you calculate the speed with which a mark, a marked piece of information, is placed in contact with another in the same word or from one end of the book to another?” Derrida also discusses ‘the double or the simulation of the event ‘‘Joyce’’, the name of Joyce, the signed work, the Joyce software today, joyceware’ (Jacques Derrida, ‘Ulysses Gramophone: Hear Say Yes in Joyce’, trans. Tina Kendall and Shari Benstock, in Jacques Derrida, ed. Derek Attridge, *Acts of Literature*. London: Routledge, 1992, 147–148).

the very ‘beginning’ of the text, the very ‘end’ of the text, and this very long sentence from about 28% of the way through the book:

The warped flooring of the lair and soundconducting walls thereof, to say nothing of the uprights and imposts, were persianly literatured with burst loveletters, telltale stories, stickyback snaps, doubtful eggshells, bouchers, flints, borers, puffers, amygdaloid almonds, rindless raisins, alphybettyformed verbage, vivlical viasses, ompiter dictas, visus umbique, ahems and ahahs, ineffible tries at speech unasyllabled, you owe mes, eyoldhymns, fluefoul smut, fallen lucifers, vestas which had served, showered ornaments, borrowed brogues, reversibles jackets, blackeye lenses, family jars, falsehair shirts, Godforsaken scapulars, neverworn breeches, cutthroat ties, counterfeit franks, best intentions, curried notes, upset latten tintacks, unused mill and stumpling stones, twisted quills, painful digests, magnifying wineglasses, solid objects cast at goblins, once current puns, quashed quotatoes, messes of mottage, unquestionable issue papers, seedy ejaculations, limerick damns, crocodile tears, spilt ink, blasphematory spits, stale shestnuts, schoolgirl’s, young ladies’, milkmaids’, washerwomen’s, shopkeepers’ wives, merry widows’, ex nuns’, vice abbess’s, pro virgins’, super whores’, silent sisters’, Charleys’ aunts’, grandmothers’, mothers’-in-laws, fostermothers’, godmothers’ garters, tress clippings from right, lift and cintrum, worms of snot, toothsome pickings, cans of Swiss condensed bilk, highbrow lotions, kisses from the antipodes, presents from pickpockets, borrowed plumes, relaxable handgrips, princess promises, lees of whine, deoxodised carbons, convertible collars, diviliouker doffers, broken wafers, unloosed shoe latchets, crooked strait waistcoats, fresh horrors from Hades, globules of mercury, undeleted glete, glass eyes for an eye, gloss teeth for a tooth, war moans, special sighs, longsufferings of longstanding, ahs ohs ouis sis jas jos gas neys thaws sos, yeses and yeses and yeses, to which, if one has the stomach to add the breakages, upheavals distortions, inversions of all this chambermade music one stands, given a grain of goodwill, a fair chance of actually seeing the whirling dervish, Tumult, son of Thunder, self exiled in upon his ego, a nightlong a shaking betwixtween white or reddr hawrrors, noondayterrorised to skin and bone by an ineluctable phantom (may the Shaper have mercery on him!) writing the mystery of himsel in furniture. (*FW* 183.8– 184.10)

This section of *Finnegans Wake* shows the artist figure Shem at work (Shem is based on Joyce himself). Shem’s method of composition – the accumulation of random, everyday bric-a-brac – is also a self-reflexive commentary on Joyce’ method of composing *Finnegans Wake*. Along with a structure based on Giambattista Vico’s *The New Science* (1725) and the use of multiple languages and wordplay, the gathering and adapting arrangement of pre-existing or ‘found’ literary, cultural, or historical materials (including squashed quotations or

“quashed quotatoes”) was a central artistic technique in Joyce’s creation of the text (perhaps reflecting the confusing mergings and transformations of dreams). As such, it is easy to see why this section has become a critical hotspot – it can be used to discuss or explain the Modernist bricolage of *Finnegans Wake* itself. Meanwhile, the ‘beginning’ and ‘ending’ of the text have frequently been used to demonstrate the cyclical nature of the text – that it has no real ‘beginning’ or ‘ending’. As is well known, *Finnegans Wake* ‘begins’ (or begins again, depending) in the middle of a sentence “riverrun, past Eve and Adam’s, from swerve of shore to bend of bay, brings us by a commodius vicus of recirculation back to Howth Castle and Environs” (*FW* 3.1–3). The ‘beginning’ of that sentence can be found at the ‘end’ of the book: “Finn, again! Take. Bussoftlhee, mememormee! Till thousandsthee. Lps. The keys to. Given! A way a lone a last a loved a long the” (*FW* 628.14–16). Thus the text’s structure replicates a central theme of the text itself – repetitions and returns (demonstrated in its preoccupations with cycles of history, literary recycling, and different forms of resurrection).

To find these areas of critical interest, we use the text reuse detection program *text-matcher*, originally developed by Jonathan Reeve for the Middlemarch Critical Histories project (Reeve et al., 2017). The algorithm operates in two passes. The first compares lemma trigrams using Python difflib’s SequenceMatcher, which as the module’s authors describe it, “predates, and is a little fancier than, an algorithm published in the late 1980’s by Ratcliff and Obershelp under the hyperbolic name ‘gestalt pattern matching’” (Peters, 2016). This library matches text approximately, automatically ignoring textual differences it considers “junk,” or differences that would be unimportant to most human readers. This allows for a first-pass fuzziness. From there, *text-matcher* expands the match in either direction, comparing Levenshtein edit distances between candidate lemmas, and ignoring punctuation, line breaks, and paratext such as page numbers and footnotes. This allows us to avoid many of the difficulties that arise from OCR’d texts. Crucially, it also ignores XML tags, which enables us to run this program over a TEI XML source text: an edition of *Finnegans Wake* encoded in the eXtensible Markup Language of the Text Encoding Initiative.³

From the beginning, we didn’t want this project to be restricted to just the *Wake*, but to build a repeatable, standards-focused framework which could be used in other applications. Toward this end, we chose to encode data in TEI XML, such that our digital edition, accompanying annotations, and all related information would be available for future projects to remix and reuse. This follows the methodology used by Open Editions, a project to which this experiment contributes.⁴

However, since XML is notorious for certain limitations, such as its inability to incorporate overlapping tags, we use a relatively new TEI feature, the

³For an introduction to the TEI, see (Cummings, 2013).

⁴Open Editions, at open-editions.org, is first described in (Reeve and Gabler, 2019), and encompasses a specification for the creation of richly-annotated TEI XML scholarly editions, along with a software stack that manages and publishes them.

`<standOff>` tag, which allows us to maintain a separate file containing links from passages in our source XML to the JSTOR articles that quote them, with character offsets and bibliographic metadata for each. These two files—the text and annotations—are then transformed into HTML using a custom script written in the Haskell programming language, and served as a static website.

Figure 1: Quotations in Narrative Time

Figure 2: Quotations by Year of Quotation

The greatest insight of this project, however, comes not from the creation of a website, but from the data generated from an analysis of its content. Fig. 1 shows the number of quotations of the *Wake* found in the secondary literature, according to their position in the novel, with the novel’s first passages on the left, and the last on the right. The shape of this bar chart is strikingly similar to that found in a similar study of *Middlemarch*, and with a larger unpublished analysis

at the Stanford Literary Lab, comparing literary texts and their quotations in British Periodicals Online (Reeve et al., 2017).

If we examine the date ranges of these quotations, as shown in fig. 1, we see that the greatest number of them come after 1986. While some of this trend may be attributable to an uneven availability of journals digitized for JSTOR, it is nonetheless suggestive of a significant jump in critical attention to the *Wake* around this time. [Richard: do you have a guess as to why this might be?]
